

Medecision helps you mitigate your risks for more predictable financial and clinical outcomes across your populations.

Payment reform pressures are mounting, and your organization is responding with more risk-bearing arrangements. You need a trusted partner who can give you both the technology and the proven path to success in your population health management initiatives. *That's where we fit in.*

A More Predictable Future

Payers and providers are seeking the same goal—to proactively mitigate and better manage the inherent risks and costs associated with caring for patients with complex health issues. From data assimilation and insight to workflow optimization and patient engagement, Medecision has the right mix of technology and expertise to help your organization successfully achieve its quality measures and financial goals.

As a 25-year veteran of data analytics, care management, care coordination and population health software solutions, we've seen it all. Whether your organization is just starting on its value-based reimbursement journey or is ready to expand the breadth and depth of your risk-bearing arrangements, Medecision can get you up and running fast with a clear path for growth as your care delivery model evolves.

How Does It Work?

The most complete picture

With Aerial Gateway, person-centric data from multiple, disparate systems across your network can be aggregated and analyzed to build a 360-degree view of the individual from a clinical and psycho-social-economic perspective, which in turn can be integrated into personalized care plans that reduce risks, avoid unnecessary hospitalizations and help your patients achieve optimal health.

Intuitive workflow automation

With the Aerial Workflow Engine, rules-based workflows can be easily created to develop and consistently deploy multi-disciplinary care management programs and patient engagement programs that help you optimize outcomes. Business processes can be standardized for more predictable clinical care management and consistent results.

Personalized patient and care team engagement

The full suite of Aerial Patient Engagement solutions makes it possible for you to create an inspired, informed and engaged circle of care team members, including the patient, community services, non-acute service providers and family members to support adherence to care plans.

The most experienced team

With more than 25 years of experience in building and deploying software solutions that help organizations mitigate financial risks and coordinate care across multiple settings, Medecision's team of professionals can give you a comprehensive path to achieving the financial, clinical and operational goals of your population health management initiatives.

Using Medecision's software and services, providers are seeing transformative results:

9% reduction of hospital stays

7% reduction of diabetes costs per member

20% reduction of utilization review costs
