

Aerial Bundled Episode Manager™

What if you could **easily manage** post-acute and care transitions to **control costs** and **optimize outcomes** in the 90-day episode period?

The introduction of bundled payments represents a radical shift for Integrated Delivery Networks (IDNs) as they move from payment for all services provided to a model where they are held accountable for achieving a preset total cost of care per episode model. Under such arrangements, they are required to organize multiple activities and team members around each patient in the bundled care model and be able to provide coordinated team services across the entire continuum of care. This new focus requires new workflow tools to help the care team improve quality outcomes and manage the total costs of care.

Aerial Bundled Episode Manager™ is designed to meet the need for workflow tools and processes, helping IDNs under bundled payment arrangements achieve improved quality outcomes and optimal reimbursements.

Efficiently create individualized care plans that include Goals, Actions and Barriers.

Quickly identify patients that need attention and adjust care plans accordingly.

Easily determine risk of readmission using LACE assessment questionnaires.

With Aerial Bundled Episode Manager™, your organization can efficiently and effectively accomplish the following:

- Prioritize patients for intervention due to risk factors and measure episodes against a planned clinical pathway.
- Manage all patients at once with a simple, intuitive, graphical interface that includes visualization of progress in the 90-day period.
- Track patients to assess their compliance and adherence to evidence-based care pathways—ensuring they are following discharge instructions, taking their medications properly, etc.
- Manage the risk inherent in transitioning patients between care settings.

One of many apps in Medecision's state-of-the-art Aerial Population Health Management portfolio, Bundled Episode Manager provides the insight needed to identify and target opportunities for meaningful cost reduction and quality improvement.

Aerial Bundled Episode Manager supports care coordination around specific clinical episodes of care, helping care navigators focus on risk identification, intervention and coordination of care across multiple settings.

Learn more about how Aerial can help you improve member satisfaction, increase quality and decrease risk.
