

Aerial™ ePHR Health Summary

What if you could give **all members** of the care team a **longitudinal, 360° view of patient health?**

Accurate and complete information about individuals is critical to providing high-quality, coordinated care¹. Harnessing this patient and practitioner data and having it immediately accessible by all participants, however, has proven to be a challenging task.

Health Summary is a state-of-the-art longitudinal patient health record that dynamically generates a comprehensive—and vital—360° view of a patient’s health status, providing the most current and complete information available.

This application enables critical visibility into care plan information, such as clinical program enrollment, associated risk and patient health goals. It also provides a more comprehensive view to enable insight into opportunities for patient health improvement, key quality metrics, hospitalizations, emergency room visits, doctor visits, medications, conditions with severity indicators and more.

Determine associated risk via a dynamic, longitudinal view of the patient’s health data and care services.

Empower and inform the distributed care team and community service providers with easy-to-understand, up-to-the-minute care plan information.

Easily push patient information across the care chain, third-party apps and systems.

With Aerial ePHR Health Summary, your organization can accomplish the following:

- Deliver dynamic clinical and financial views of individual members, optimized for Patient Engagement, Care Coordination and Care Management, across all care settings and environments.
- Tailor views to the organization, line of business, role and viewer.
- Provide easy-to-understand, up-to-the-minute care plan information to empower distributed care team members, including community service providers.
- Share care information in multiple ways and formats: Print a summary, save it as a PDF, share access via web-based portals or export it using HL7 CCD formats.

Just one of many apps in Medecision's state-of-the-art Aerial Population Health Management portfolio, ePHR Health Summary helps organizations of all shapes and sizes drive clinical and financial success.

Aerial™ ePHR Health Summary delivers an actionable, complete, 360° clinical picture of a patient's health in near-real-time and in a format easily shared across extended care teams—no matter where they are.

Learn more about how Aerial can help you manage clinical and financial risk with confidence.
