

## Risk Score Manager's reports, HCC information, searchable displays and work list combine to:

- Ensure compliance and address lost or at-risk premium revenue by evaluating undercoding.
- Examine physician and member data to identify outreach opportunities for scoring documentation improvement or enrollment in special programs.
- Enable the capture of the current year's reimbursements by reviewing dashboards that highlight HCC scores, specific diagnosis, missing codes and other data that informs plans for future care needs while maintaining accurate scoring.
- Enable network physicians to view and improve HCC scoring results for the members for which they are responsible and use it to increase reimbursement.
- Determine whether a member has undergone an annual physical exam and whether his/her plan includes applicable incentives.

Just one of many apps in Medecision's state-of-the-art Aerial Population Health Management portfolio, Risk Score Manager enables organizations to gain valuable insight and begin to realize improved scores and additional reimbursement revenue.

**Aerial Risk Score Manager enables providers to monitor and more accurately report on the health of their population for optimal HCC scoring, Star Ratings, HEDIS, P4P or other reimbursement programs.**
