Cloud-Based Population Health Management Apps and Strategic Advisory Services for Health Plans

Who We Are

With 30 years of risk management experience to our name, Medecision is uniquely qualified to help you achieve targeted clinical and financial results within the ever-changing landscape of healthcare. Aerial™, Medecision's HITRUST CSF®-certified, SaaS platform and suite of applications for care and population health management, helps the nation's leading plans and risk-bearing organization optimize the delivery of personalized, predictive and prescriptive decision support for clinicians, physicians, consumers and their caregivers.

What We Do

Medecision provides health plans with the flexible technology and services needed to manage high-cost, complex populations, including government beneficiaries, so you can:

- **Identify high-risk members and build engagement to reduce costs** — Care management programs that use predictive analytics and strategies to align members and care teams for more effective network usage.

- **Comply with regulatory requirements** — Population-specific, data-driven programs that incorporate compliance requirements so you can zero in on clinical and financial risk.

- **Maximize reimbursements under value-based programs like HEDIS and Star Ratings** — Aggregated, usable data to prove the value of your programs so you can optimize quality scores and earn revenue tied to them.

- **Manage chronic care, resources, and costs** — Tools to identify at-risk and rising-risk members sooner, intervene effectively and keep members in-network to better manage care quality and cost.

- **Optimize HCC risk adjustment scores —** Care management programs that effectively track and trend HCC status and enable you to actively manage members with the highest ratings.

- **Build effective strategies that link financial performance to customer value —** Strategic consulting engagements with former operating executives who know how to drive change and deliver outcomes.

"They have a rare ability to help a client determine and assess the path forward in the midst of uncertainty."

HITRUST CSF Certified

Medecision's Aerial platform is HITRUST CSF Certified, which demonstrates that it meets the highest standards for securing PHI entrusted to risk-bearing health organizations and is appropriately managing risk.

Healthcare Liberation Framework

Medecision's vision and framework for population health closely align with industry analysts' view of a technology ecosystem which will support the desired state of healthcare and your business. Based on these imperatives, we believe that our framework comprises the critical elements of a population health management (PHM) ecosystem that will deliver the highest level of value and results.

- **Big Data Aggregation and Management** – Ingestion and integration of myriad clinical, financial and socio economic data to build the most holistic picture of individuals and populations.

- **Advanced Analytics and Cognitive Intelligence Mechanisms** – Data alone is not enough; we leverage next-generation analytics and cognitive intelligence to derive insights and micro-segment populations to effectively manage clinical and financial risk.

- **Extended Services Layer and APIs** – Secure, near-real-time delivery of intelligence across care settings, fueling and informing a wide array of apps and solutions.

- **Key Applications and Solutions** – Evidence-based, actionable, decision-support visualizations, workflows and engagement apps to deliver the most appropriate care and manage utilization; paired with a complete 360° longitudinal electronic patient health record and member education tools, our solution suite helps clients achieve not just the Triple Aim but also the Quadruple Aim.

- **Advisory Services** – Our seasoned advisory team brings a unique approach to help organizations ensure successful deployment, readiness and overall strategic development to manage clinical and financial risk with confidence.

Better Care and Experience for Individuals	Better Use of Resources for Health and Care	Better Outcomes for Local Populations	Care Team Well-Being
Dynamic Reporting, Interactive Dashboards for Data Visualization	Intelligence-Infused, Automated Workflow Solutions	Comprehensive, Sharable Longitudinal Patient Records	Patient and Physician Engagement and Education Solutions
